# TRADESCANTIA ZEBRINA 'PINK PARADISE' BY LUNDAGER™

Tradescantia is a unique genus of creeping plants native to the jungles of Central and South America. Popular among growers and consumers alike, these plants are known for their fast growth and attractive foliage. Tradescantias are often used as perennial groundcovers in warm climates and as houseplants elsewhere.

At Breeding by Lundager®, we have developed and protected a new variety: Tradescantia zebrina 'Pink Paradise® BL1'.

This eye-catching indoor plant features bright silver-pink leaves with violet accents. Pink Paradise® BL1 adds a colorful touch to any room while contributing to a healthy indoor climate.
